Subject: Status Report April 30-May 7

Accomplishments: Completed all game functions and started creating the GUI to take user input and send messages.

Problems/Risks: A lot of my class design involved numerous cross dependencies, which I focused on minimizing this week, but it could still cause problems down the road. I am finding it difficult to create an efficient system to take user input, so I have resorted to using JDialog boxes, and this might cause input desynchronization. Swing does not contain all the functionality I anticipated, so creating the actual GUI of the board may be difficult.

Next Steps: I need to finish the GUI and start to create the computer player.
